

Before we connect anything, here's exactly how this works.

What it does · where your data goes · how you stay in control.

You can stop me at any point, and you can revoke my access yourself at any time — without involving me.

THE PROMISE

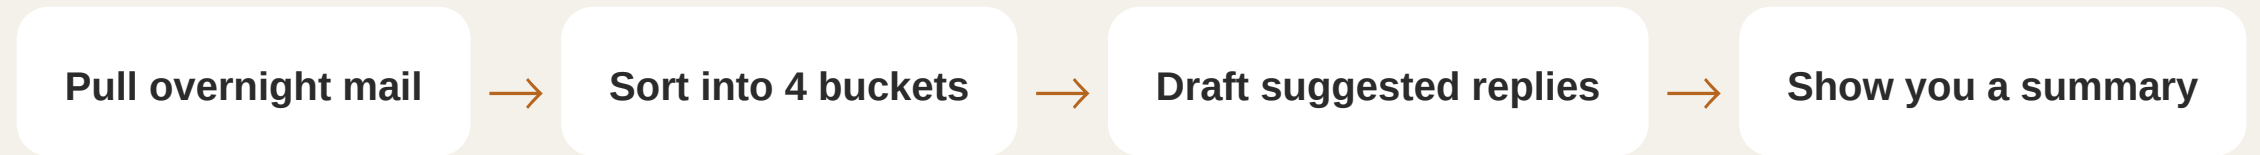

**“Nothing touches your inbox
unless you press the button.”**

There is no background process reading your mail. The tool runs only when you click “Start my morning.” No button press, no activity.

WHAT HAPPENS WHEN YOU CLICK

It proposes. You decide.

At this stage it only proposes. It does not send, delete, or move anything. You review everything before any action is ever taken.

THE FOUR BUCKETS

So nothing time-sensitive gets lost.

Client

From or about a client — highest care, always reviewed.

Important

Time-sensitive or needs your personal attention.

Shopping

Receipts, orders, promotions, coupons.

Read later

Newsletters, FYI, low-priority.

WHERE YOUR DATA GOES

Three places. No more.

1 · Gmail

Your mail stays in your own account.
We request read access only.

2 · Claude API

Each message's text is sent to sort it
— in transit only, and not used to
train models.

3 · Your private database

A categorized copy, yours alone —
no sharing with anyone else I work
with — with the bodies encrypted.

THE SORTING STEP, UP CLOSE

What happens when your email is sorted

Your email text → Read once → Answer sent back → Line goes quiet

- **Never used to train AI.**
Under Anthropic's commercial terms, your email is not used to train their models.
- **Read once, not kept around.**
Each email is a separate request with no ongoing access; Anthropic deletes it within about 30 days — or nothing is retained at all if we turn on Zero Data Retention.
- **Encrypted the whole way.**
The connection to Anthropic is encrypted end to end.

True North AI covers the processing cost — nothing for you to set up or pay.

You can erase it all in one click.

- The categorized history is kept so you get a durable, searchable archive — the goal is that you never lose an email again, so nothing is auto-deleted.
- On a single request, I delete your entire database and the stored access token.
- You can also cut off my access yourself in your Google security settings in ~30 seconds.
- I confirm any deletion in writing.

THE ACCESS I'LL REQUEST

Read-and-modify — but I only ever propose.

The modify permission is there for later, only if and when you decide you want the tool to move or file mail for you. Today, at the starting rung, it reads and suggests — nothing more.

We move at your pace.

THE TRUST LADDER

We start at the top of caution.

1 · Assisted

WE START HERE

You click, the tool proposes, you review everything before any send or move.

2 · Supervised

Tool auto-handles safe buckets (shopping, read-later); drafts and client mail still reviewed.

3 · Automated

Scheduled runs, minimal review. Only if you ask for it.

YOUR CALL

Comfortable with this?

Any questions before we connect your account?

True North AI · governance-first by design.
